Remote Access / Dynamic DNS

Trying to remote access a web cam, home security system, home automation system, computer or other internet connected device?

Our Dynamic DNS service allows you to create an easy to remember hostname to point to your home IP address. Dynamic DNS allows you to no longer worry about your IP address. Create an easy to remember hostname to point to your IP address.

How to remote access your device:

Step 1 - Create a Hostname. (this step is already complete)

Step 2 - **Download** (<https://www.noip.com/download>) the Dynamic Update Client (DUC).

The DUC keeps your hostname updated with your current IP address.

Step 3 - **Port Forward** (<http://www.noip.com/support/knowledgebase/general-port-forwarding-guide/>) your router.

Done with all 3 steps?

Host a Game Server. Minecraft anyone?

Would you like to setup a Game Server and have your friends join you online to play your favorite video game? Create an easy to remember URL to access your own game server now.

Host a Game Server ([//www.noip.com/support/knowledgebase/how-to-setup-and-host-your-own-video-game-server/](http://www.noip.com/support/knowledgebase/how-to-setup-and-host-your-own-video-game-server/))

Host a Minecraft Server ([//www.noip.com/support/knowledgebase/how-to-host-and-configure-a-minecraft-server-with-no-ip/](http://www.noip.com/support/knowledgebase/how-to-host-and-configure-a-minecraft-server-with-no-ip/))

Still confused or don't see a service that matches your needs?

Our Technical Support team may be able to help!
