

[Home](#)

Image server access is being phased out for LXD users, see [here for details](#).

Image server for Incus and LXC

This domain hosts a public image server for use by Incus and LXC.

All images available on this server are generated using [distrobuilder](#) along with our [YAML definitions files](#).

The build themselves can be seen on our [Jenkins server](#).

Images are published after basic automated functionality testing. Should an image regress in some way, images of the past 3 days are kept available.

In LXC, this image server can be used by selecting the "lxc-download" template.

In Incus, this image server is reachable through the "images:" default remote

Currently available images
